HUNTER CONSTRUCTION GROUP

Hunter Construction Group unites six specialised disciplines under one collaborative framework. As local experts with a shared vision, we combine knowledge, skills, and experience to achieve exceptional outcomes across every project.

Established to streamline the construction process, the group was founded to reduce reliance on external suppliers, minimise delays and defects, and ensure superior quality, delivering greater value to clients.

Today, the independent businesses within Hunter Construction Group have grown into industry-leading companies, continuing to collaborate on projects and share expertise and technologies, building better together.

HUNTER GEOTECHNICAL SERVICES

GEOTECHNICAL ENGINEERING

As a leading provider of geotechnical consulting services, we use principles of soil mechanics and rock mechanics to investigate subsurface conditions and materials. From initial site investigations to complex foundation design and slope stability assessments, our team of experienced engineers work with clients to provide practical, actionable insights that help mitigate risks and optimise design solutions.

GEOTECHNICAL & ENVIRONMENTAL DRILLING

We provide a comprehensive range of geotechnical and environmental drilling and investigation services. By understanding the physical properties of soil and rock, we enable the safe and effective design of pavements, foundations, and other structures. Our team of qualified drillers holds Certificate III in Drilling Operations, ensuring compliance with industry standards.

Hunter Geotechnical Services has been delivering expert geotechnical and environmental consulting services since 2003. Evolving from a construction materials testing laboratory into a full-service consultancy, we are dedicated to supporting projects across civil, industrial, commercial, and residential sectors with precision and reliability.

ENVIRONMENTAL SERVICES

Our team of Environmental Scientists provide an extensive range of environmental solutions tailored to meet your project's goals and compliance requirements. Our expertise includes; recovered materials and waste classifications (such as VENM, ENM, and recovered aggregates), as well as comprehensive contaminated land management (PSI, DSI, and asbestos assessments).

CONSTRUCTION MATERIALS TESTING

Our NATA Accredited CMT laboratory conducts testing on aggregates, soil, concrete, and earthworks for both investigation and compliance purposes. We provide results to support the quarry, readymix concrete, commercial, and residential industries, meeting TfNSW, ASTM, and Australian Standards across a wide range of projects.

HUNTER QUARRIES

At Hunter Quarries, we've been supplying high-quality quarry materials to the Hunter, Newcastle, Mid North Coast, and Greater Sydney regions for over 20 years. Operating from our site in Karuah, we specialise in andesite rock products for civil, construction, and landscaping projects.

We take pride in delivering reliable, compliant materials, including aggregates, road base, rail ballast, and specialty rock products. Sustainability is at the core of what we do, with a strong focus on environmental management and responsible resource extraction while continuing to support our local communities.

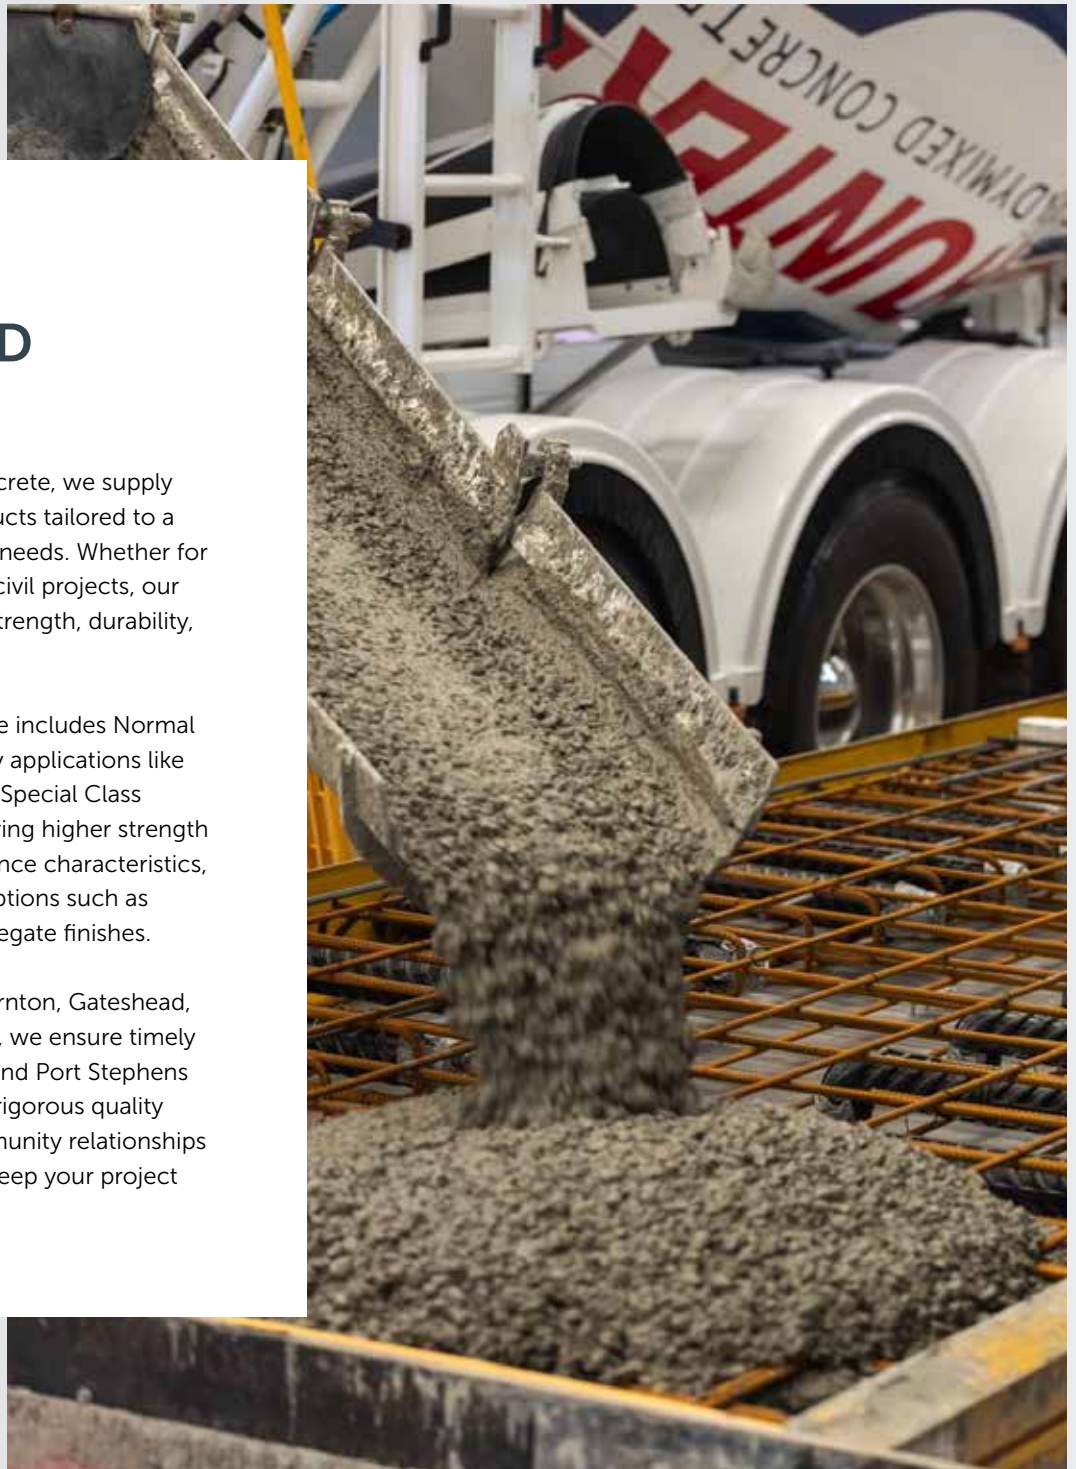

HUNTER READYMIXED CONCRETE

At Hunter Readymixed Concrete, we supply high-quality concrete products tailored to a wide range of construction needs. Whether for residential, commercial, or civil projects, our concrete solutions deliver strength, durability, and performance.

Our extensive product range includes Normal Class Concrete for everyday applications like driveways and foundations, Special Class Concrete for projects requiring higher strength grades or specific performance characteristics, and Decorative Concrete options such as coloured and exposed aggregate finishes.

With batching plants in Thornton, Gateshead, Cessnock, and Tea Gardens, we ensure timely delivery across the Hunter and Port Stephens areas. Our commitment to rigorous quality assurance and strong community relationships means you can trust us to keep your project on track.

HUNTER STRUCTURAL STEEL

At Hunter Structural Steel, we specialise in fabricating and installing high-quality structural steel for industrial and commercial buildings across Newcastle and the Hunter region.

Our portfolio features a diverse range of projects, from industrial units to commercial developments, showcasing our versatility and commitment to excellence.

As a proud member of Hunter Construction Group, we collaborate closely with our sister companies to provide integrated solutions that enhance efficiency and quality across all our projects.

HUNTER PRECAST

At Hunter Precast, we have been delivering high-quality precast concrete products throughout the Newcastle and Hunter regions for over 20 years. Our precision-made concrete panels are sought after by industrial, commercial, and residential construction companies alike.

Our comprehensive range includes cladding panels, structural elements like columns and beams, and bespoke architectural designs. We collaborate closely with clients to ensure each product meets their specific requirements, contributing to efficient and successful builds.

As a proud member of Hunter Construction Group, we have a tight and mutually beneficial relationship with our suppliers in Hunter Quarries and Hunter Readymixed Concrete that results in the highest quality inputs and a competitive cost base. Both resulting in benefits that are passed onto our clients.

HUNTER WINDOWS

At Hunter Windows, we specialise in crafting high-performance aluminium windows and doors tailored for commercial, architectural, and large-scale residential projects in Newcastle and the Hunter region. Our Australian-designed and locally manufactured products are built to enhance natural light, ventilation, and energy efficiency, ensuring comfort and durability.

Our comprehensive range includes large-format windows, awning and casement styles, sliding and bi-fold designs, as well as hinged, stacking, and pivot doors. We also offer energy-efficient thermally broken framing systems to maximise thermal comfort.
